**Screening for Barriers to Medication
Adherence** and **4 sites** are performing
PDSAs to further improveNonadherence to antiepileptic drugs (AEDs) among patients with epilepsy ranges from 26% to 79%¹, and the impact of nonadherence is not inconsequential. Poor adherence to AEDs results in lower quality of life (QoL), increased mortality, emergency department visits, hospitalizations, fractures, head injuries, and costs as reported in claims-based studies and survey research^{2,3,4}**2** new Community
